Dear Colleagues,

It is with great pleasure that we invite you to participate in this very popular seminar.

Many important discoveries and promising advances in the management of pancreatic cancer have been made over the last decade; however, it remains one of the most deadly cancers associated with high morbidity and mortality. This conference will span the breadth of this challenging disease with complex molecular biology and limited therapeutic options. Plenary sessions will cover all important aspects of pancreatic cancer management, from pre-clinical to clinical research, assessing disease biology to surgical interventions and liquid biopsy to precision medicine, convening well-known international experts to discuss these advances and how we can make progress within the field.

The conference is for all practicing medical oncologists and trainees involved in the management of pancreatic cancer. There will be a unique opportunity for trainees to have a dialogue with key opinion leaders in the field, in order to improve their understanding about the complexity and management of this disease. Overall it will be a great opportunity to meet with key decision makers from across the country and from abroad.

The conference organisers have been in touch with Royal College of Physicians to gain Continuous Medical Education (CME) accreditation equivalent to 6 points for the event.

Book early to avoid any disappointment!
